

Name one species that is a TOP predator (that lives at the aquarium):

Why are sharks important in nature?

Look at one species of shark. Name two adaptations that the shark has to help them survive.

Look at the sediment at the bottom of the exhibits. What is the sediment made of? Why is sediment important to fish?

Find three ENDANGERED SPECIES in the aquarium and list them below. (Hint: check Dangerous Lagoon) Why might they be at risk?

STUDENT NAME: _____

Name three things you can do to help the animals in the wild.

Draw a picture of your favourite animal you saw at the Aquarium today.
