

Name an **ANIMAL** that lives with each plant or algae.

Maple Tree

Squirrel

Kelp

Sea Urchin

Grass

Grass Hopper

Bull Rushes

Frog

What do plants and algae use to make their own food?

Sun, water, carbon dioxide,
nutrients.

How can plants and algae help animals survive?

Provide oxygen, food resource,
shelter.

What do humans use algae for?

Used to thicken items like ice
cream and toothpaste.

Look at the **PACIFIC KELP FOREST** tank. Do you think the kelp is flexible or rigid? Why would it have that structure (HINT: think about ocean waves)?

The kelp is flexible because the water is constantly moving. If it were rigid it would snap.

What things might stop plants and algae from getting sunlight?

Oil, air pollution, litter.

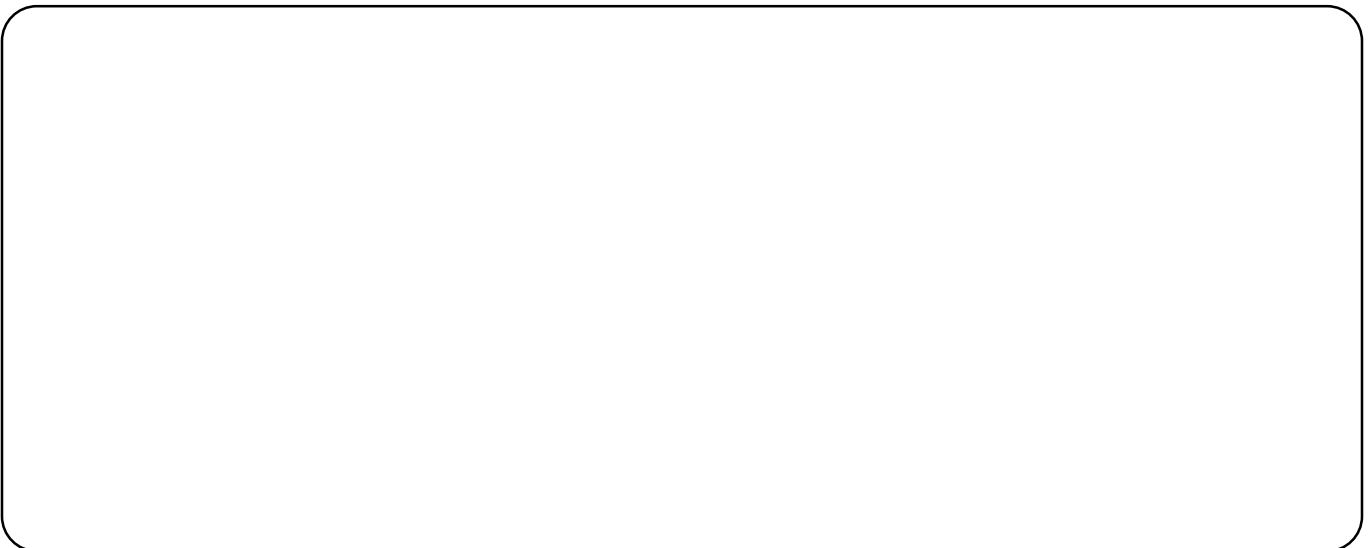

Name or draw three things you can do to help our plants and algae.

1 Ride my bicycle to school instead of having my parents drive me.

2 Put on a sweater the next time I am cold instead of turning up the heat.

3 Use a reusable water bottle instead of a throw away plastic one.

Draw a picture of your favourite animal you saw at the Aquarium today.
